It is the successor to Microsoft Office 2010 and the predecessor to Microsoft Office 2010, no OS X equivalent was released. Microsoft Office 2013 includes extended file format support, user interface updates and support for touch among its new features and is suitable for IA-32 and x64 systems.[7] Office 2013 is incompatible with Windows XP, Windows Server 2003, Windows Vista, Windows Server 2016 and Windows Server 2019.[9][10][11][8] A version of Office 2013 is compatible with Windows Server 2012 R2, Windows Server 2016 and Windows Server 2019.[9][10][11][8] A version of Office 2013 comes included on Windows RT devices.[12] It is not supported on Windows 5 Pri and Windows Development on this version of Microsoft Office 2013 to general availability on January 29, 2013.[1] This version includes new features such as integration support for online services (including OneDrive, Outlook.com, Skype, Yammer and Flickr), improved format support for Office Open XML (OOXML), OpenDocument (ODF) and support for multi-touch interfaces. Microsoft Office 2013 comes in twelve different editions, including three editions for retail outlets, two editions for volume licensing channel, five subscription-based editions available through Microsoft Office 365 program, the web application edition known as Office Web Apps are available free of charge on the web although enterprises may obtain on-premises installations for a price. Microsoft Office applications may be obtained individually; this includes Microsoft Visio, Microsoft Vis support will end on April 11, 2023. On June 9, 2018, Microsoft announced that its forums would no longer include Office 2013 or other products in extended support. [15] On August 27, 2021, Microsoft announced that Microsoft Outlook 2013 SP1 with all subsequent updates will be required to connect to Microsoft 365 Exchange servers by November 1, 2021; Outlook 2013 without SP1 will no longer be supported on Windows 11.[17] Development Development Started in 2010 while Microsoft was finishing work on Office 14, released as Microsoft Office 2010. On January 30, 2012, Microsoft released a technical preview of Office 15, build 3612.1010, to a selected group of testers bound by non-disclosure agreements.[18] On July 16, 2012, Microsoft held a press conference to showcase Office 2013 and to release the Consumer Preview.[19] The Office 2013 Consumer Preview is a free, fully functional version but will expire 60 days after the final product's release. [20][21] An update was issued for the Office 2013 Customer Preview suite on October 11, 2012. [13] It was made available to TechNet and MSDN subscribers on October 24, 2012. [23] On November 15, 2012, 60-days trial versions of Microsoft Office 2013 Professional Plus, Project Professional 2013 and Visio Professional 2013 were made available to the public over the Internet.[5][24] Microsoft released the service pack 1 update on February 25, 2014.[25] Features New features Office 2013 introduces Click-To-Run 2.0 installation technology for all editions based on Microsoft App-V Version 5.[26] Previously, only certain editions of Office were a separate Q drive was created and installed files of Office were isolated from the rest of the system, causing many Office add-ins to not be compatible.[27] With the newer Click-To-Run technology, Office 2013 installs files just like Windows Installer (MSI) to the Professional Plus are available in both retail (C2R) and volume (MSI) channels. Office 2013 is more cloud-based than previous versions; a domain login, Office 365 account, or Microsoft account can now be used to sync Office application settings (including recent documents) between devices, and users can also save documents directly to their OneDrive account. [29] Microsoft Office 2013 includes updated support for ISO/IEC 29500, the International Standard version of Office Open XML (OOXML) file format: in particular it supports OASIS version 1.2 of ISO/IEC 26300:2006, Open Document Format,[30] which Office 2013 can read and write.[31] Additionally, Office 2013 provides full read, write, and edit support for ISO 32000 (PDF). New features include a new read mode in Microsoft Word, a presentation mode in Microsoft Word, a presentation mode in Microsoft Word, a presentation mode in Microsoft Word can also insert video and audio from online sources as well as the capability to broadcast documents on the Web.[32] Word and PowerPoint also have bookmark-like features which sync the position of the document between different computers. The Office 2013, introducing additional editing features and interface changes.[33] Other features of Office 2013 include: PDF Import feature in Microsoft Word Improved text wrapping and improved Track Changes feature in Microsoft PowerPoint Remote app and Office add-in to control presentations from a Windows Phone or Android phone. In all other regions, retail copies of Office 2013 and Office 365 subscriptions only contain a product key, and direct users to the Office website to redeem their license and download the software. [47][48] Licensing changes The original license agreement for retail editions of Microsoft Office 2013 was different from the license agreements of Previous versions of Microsoft Office in two significant ways. [49] The first of these was that the software could no longer be transferred to another computer. In previous versions of Office, this restriction applied only to OEM editions; retail Office license agreements allowed uninstalling from one computer to install on another computer, [49] Digitally downloaded copies of Office were also said to be permanently locked to that PC's hardware, preventing it from being transferred to any other computer, or if they later became unable to use the computing device that the original license was downloaded to (e.g. hardware became inoperable due to malfunction) then a completely new, full-priced copy of Office 2013 would have to have been purchased to replace the prior one. [49] Microsoft stated that this change was related to the software piracy that has been rampant for years, worldwide.[50] However, many commentators saw this change as an effort to forcibly move its customers towards the subscription-based business model used by the Office 365 service.[51][52][53] The legality of this move, particularly in Europe, has been questioned.[54] However, on March 6, 2013, Microsoft announced that equivalent transfer allowed to transfer it to another user.[55][56] The second difference, which remains in the updated licensing agreement, is that the software can be installed on only one computer. In previous versions of Office, this restriction also applied only to OEM editions; retail Office license agreements allowed installing the product on two or three computers, depending on the edition.[49] Microsoft requires an account in order to activate any Office edition from 2013 on. [58] Office 365 Main article: Microsoft Office 365 The Office 365 subscription services, which were previously aimed towards business and enterprise users, were expanded for Office 2013 to include new plans aimed at home use. The subscriptions allow use of the Office 2013 applications by multiple users using a software as a service model. Different plans are available for Office 365, some of which also include value-added services, such as 20 GB of OneDrive storage (later increased to 1 TB) and 60 Skype minutes per month on the new Home Premium plan.[59] These new subscription offerings were positioned as a new option for consumers wanting a cost-effective way to purchase and use Office on multiple computers in their household.[60] Office RT A special version of Office 2013, initially known as Office 2013 Home & Student RT, is shipped with all Windows RT devices. It initially consisted of Word, Excel, PowerPoint and OneNote. In Windows RT 8.1, the suite was renamed Office 2013 RT and Outlook was added. The edition, whilst visually indistinguishable from normal versions of Office 2013, contains special optimizations for ARMbased devices, such as changes to reduce battery usage (including, for example, freezing the animation of the blinking cursor for text editing during periods of inactivity), enabling touch mode by default to improve usability on tablets, and using the graphics portion of a device's SoC for hardware acceleration.[61][62][63] Windows RT devices on launch were shipped with a "preview" version of Office Home & Student 2013 RT. The release date for the final version varied depending on the user's language, and was distributed through Windows Update when released.[63] On June 5, 2013, Microsoft announced that Windows RT 8.1 would add Outlook to the suite in response to public demand. [64] Office RT modifies or excludes other various features for compatibility reasons or resource reduction. To save disk space; templates, clip art, and language packs are downloaded online rather than stored locally. Other excludes features include the removal of support for third-party code such as macros/VBA/ActiveX controls, the removal of support for older media formats and narration in PowerPoint, editing of equations generated with the legacy Equation Editor, data models in Excel (PivotCharts, PivotTables, and QueryTables are unaffected), searching embedded media files in OneNote, along with data loss prevention, Group Policy support, and creating e-mails with information rights management in Outlook. [64][65] As the version of Office RT included on Windows RT devices is based on the Home & Student version, it cannot be used for "commercial, nonprofit, or revenue-generating activities" unless the organization has a volume license for Office 2013 already, or the user has an Office 365 subscription with commercial use rights.[66] Windows Store apps Alongside Office RT, free versions of OneNote and the Lync client were made available as Windows Store apps upon the release of Windows Sto [68] The OneNote app has since received several major updates, including camera integration, printing abilities, and multiple inking options. Universal Microsoft Word, Excel, and PowerPoint apps for Windows 10 were released in 2015.[69][needs update] Office Mobile Further information: Microsoft Office Mobile Windows Phone 8 ships with an updated version of the Office Mobile suite, consisting of mobile versions of Word, Excel, PowerPoint, and OneNote. In comparison to their Windows Phone 7 versions, the new versions add an improved Office Hub interface that can sync recently opened and modified documents (including changes to documents stored via Office 365 and SkyDrive),[70] a separated OneNote app with additional features (such as voice notes and integration with the new "Rooms" functionality of the OS), and improved document editing and viewing functionality.[71] In June 2013, Microsoft released a version of Office Mobile for iPhone; it is similar to the Windows Phone version, but originally requires an Office 365 subscription to use.[72] A version for Android smartphones was released in July 2013; it, too, originally needed Office 365 for use.[73] Apps for iPad and Android tablet computers were released in March 2014 and January 2015, respectively.[74][75] These, along with their smartphone equivalents, have been made free for personal use, though certain premium features have been paywalled and require Office 365, which includes licensing of the apps for business use.
